Calculus Calculator

Step-by-step solutions included

Compute derivatives, partial derivatives, definite/indefinite integrals, limits, and Taylor series from a single expression, with the full working shown.

f'(x) Derivative | ∂/∂x Partial derivative | ∫ Integral | lim Limit | Taylor series

Expression

x^3 + 2*x^2 - 5*x + 1

Multiply * · Power ^ · e.g. 2*x^2 + sin(x) · asin(x) = arcsin(x)

$$x^3 + 2 \cdot x^2 - 5 \cdot x + 1$$

Operators: x^n | x^2 | x^3 | √ | ÷ | ( )

Trig: sin | cos | tan

Inverse trig: arcsin | arccos | arctan

Hyperbolic: sinh | cosh | tanh

Log / Exp: ln | log_{10} | exp

Constants / Misc: π | e | |x|

Variable: x

Derivative order: 1

Calculate

Result Fraction

$$3 \cdot x^2 + 4 \cdot x - 5$$
